

Brass Wires

Brass wires are used for modern wire EDM machines and come with various advantages. First of all, they are perfect for all machines with high-speed, precision functions, as well as being long-lasting and made from quality materials. They are easy to use and give your product a better finish. They are practical and affordable, very high quality, and save considerable energy which lowers business costs. At Rivadossi Trafilerie you will find a vast range of brass EDM wires, with detailed product data sheets containing helpful information such as straightness, performance and spooling. You can read descriptions of our extensive range online or download the PDF data sheets. Get an online quote based on the type of product you need, or based on the spool size, weight and diameter.

Spools Dimension	Net Weight
Din 125	4
Din 160	8
Din 200	16
Din 250	25
P5	5/7
P10	10
P15	20/24
Din 355	45

OT1100

New high power wire OT/1100
for edm wire machines

Description

Brass wire 60/40 with high resistance

Advantage in use:

- Saving of time
- The best finishing of the pieces with high thickness
- The lowest waste of power

[> DOWNLOAD PDF](#)

High quality level

Core: Brass wire with high resistance made by Electrolytic cathode

Colour: Bright yellow

Tensile strength: 1100 N/mm²

Alongation: <1%

Diameter tolerance: -0,000/-0,001

Straightness: For automatic threading

Power: High power for binding cut

Spooling: Precise, checked layer by layer
